SUMMARY

Product Designer with 3+ years in B2B SaaS and fintech. I start in an LLM to frame the problem and synthesize research, move to rapid prototyping to test direction with real users, then bring it into Figma for systems and polish. I stay close to engineers the whole way through, not just at handoff. Work I've shipped: **87.5% reduction in candidate review time** at FlairxAI, **30% faster time-to-insight** in financial reporting at Northern Trust. Figma-heavy, strong on design systems, good with data-dense interfaces where the complexity can't be faked away.

EXPERIENCE

Northern Trust

Product UX & Design

Jan 2026 – Present

Financial Workflow Redesign · Enterprise B2B · Dense Data Interfaces

- Redesigned financial reporting workflows for portfolio managers. Applied progressive disclosure to make dense data actually scannable, **cutting time-to-insight by ~30%** across three core modules.
- Before opening Figma, ran 8+ interviews with portfolio managers and pulled SQL telemetry to understand what was actually broken. Got PM and engineering aligned on the real problem before any design work started.
- Shipped 20+ prototypes across sprints, checked feasibility with engineers at each stage, and stayed involved through QA and after launch.

FlairxAI

Product Designer UI/UX

Apr 2025 – Dec 2025

AI-Powered B2B SaaS · Full Product Ownership · AI-First Process

- Used LLMs to frame problems and synthesize research, A/B tested ideas with real users before committing, then moved into Figma for the design system and final polish. **Cut MVP launch time by 2 months.** Solution approved first presentation to the founders.
- Built the Figma design system from zero: tokens, variants, component documentation. Worked daily with PMs and engineers to make sure the components matched how the product actually worked, which meant less back-and-forth once things moved to development.
- Designed the analytics dashboard. Candidate review time went from 40 minutes to 5. Scheduling went from 2 hours to 30 minutes. **87.5% and 75% reductions.** Kept iterating with PM and engineering after launch using live product data until the numbers held.

Keel Foundation

Product Designer UI/UX

Sep 2024 – Feb 2025

Accessibility-First SaaS · Research to Redesign

- Ran research with 12 participants: interviews, surveys, usability tests. Turned what I found into personas and journey maps so the team had a shared view of what needed fixing before anyone touched the product.
- Shipped a new navigation system using progressive disclosure. **Complexity down 40%, satisfaction up 15%.** Leadership approved rolling it out across the whole platform.
- Made WCAG 2.1 AA part of every deliverable from the start, not a review step at the end. Wrote annotated specs and style guides so engineering had clear guidance on every state.

Getup Nutrition

Product Designer UI/UX

Feb 2025 – Apr 2025

Celebrity Product Launch · E-Commerce · Mobile and Desktop

- Designed the full UX for a celebrity product launch, mobile and desktop. The challenge was making it feel like a brand moment while still getting people through checkout.
- Built a pop-up that **drove a 5% lift in conversion.** Ran usability tests with 10 people before launch, found the friction in checkout, and fixed it before the campaign went live.

Distro – ATLAS Institute, CU Boulder

UX Research Lead

Jan 2024 – May 2025

B2B Retirement Software · Research and Strategic Pivot

- Interviewed financial advisors and found the product was solving the wrong problem for the wrong customer. Built the research case for a full B2B to B2C pivot, **projected to improve adoption by ~40%.**

EDUCATION

M.S. Creative Technology & Design , University of Colorado Boulder, ATLAS Institute

ATLAS Institute Scholarship Recipient (2023–2025)

2023 – 2025

Bachelor's in Design (Honors) , Woxsen School of Arts and Design, India

2018 – 2022

SKILLS & TOOLS

Design Tools: Figma (design systems, tokens, variants, component libraries), Adobe Photoshop, Adobe Illustrator, Adobe XD, Framer, Axure

UX Disciplines: End-to-End Product Design, Wireframing, High-Fidelity Prototyping, Visual Design, Interaction Design, Design Systems, User Research, Usability Testing, A/B Testing, Metrics-Driven Design, Success Metrics Definition, Accessibility (WCAG 2.1 AA), Information Architecture, Data-Dense Interface Design, Heuristic Evaluation

Technical: HTML, CSS (Working Knowledge), JavaScript (Foundational), SQL, API Concepts, Agile, Design-to-Engineering Handoff, Front-End Component Concepts, Cross-Functional Collaboration (PM, Engineering, Founders)

AI-First Workflow: LLM-Assisted Problem Framing & Research Synthesis (Claude, ChatGPT), AI-Assisted Prototyping & Ideation (Cursor, Loveable), Design Automation (n8n), Rapid AI Iteration
